

Configuring the project on Eclipse:

1. Import the given project file in “src” folder as a normal JAVA Project.
2. Next step is to import the library file or jar
 - a. Right click on the project then properties.
 - b. Click on “Java Build Path” from the left side of the window
 - c. Then click on “Libraries”

- d. Press the “Add External JARs” button and navigate to the given project folder. Select “lib” folder and you will find the “btreelib.jar”. Select it and press **open**. You are ready for the coding phase!! (Run the BTTest.java under “tests” to validate the configuration)
